EXPERIMENT 02

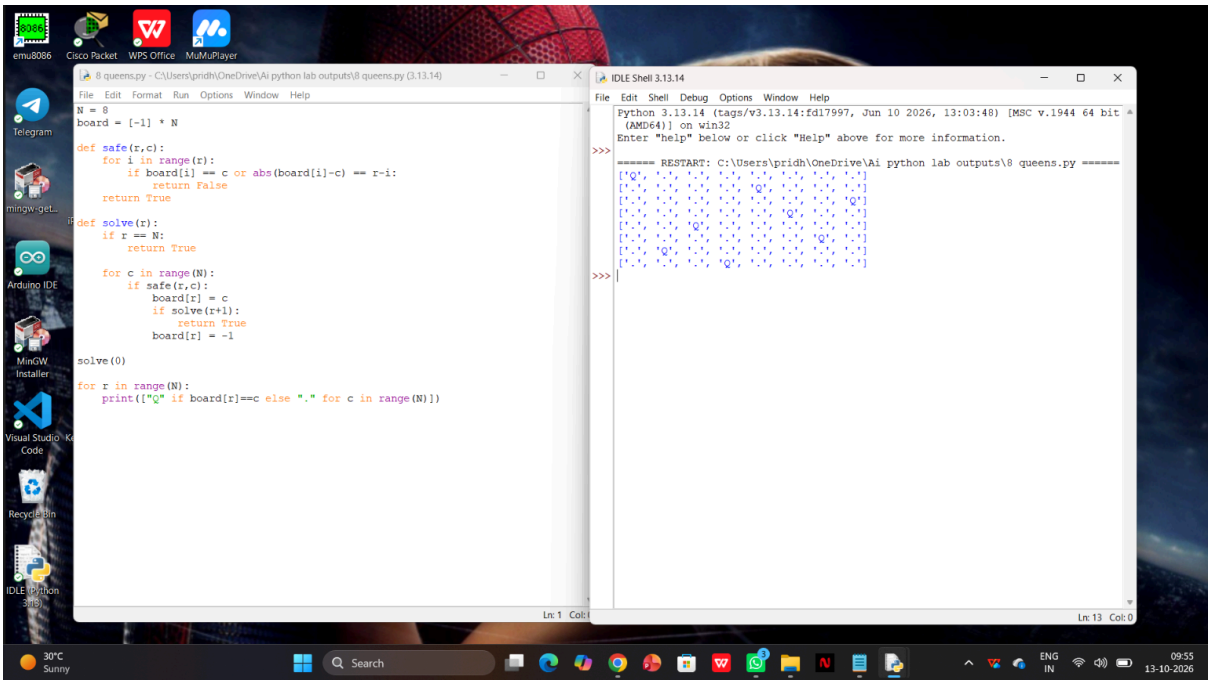

Aim:

To write a Python program to place eight queens on a chessboard so that no two queens attack each other.

Algorithm:

- Create an 8 × 8 chessboard.
- Place one queen in each row.
- Check whether the column and diagonals are safe.
- If the position is safe, place the queen.
- If no safe position exists, backtrack.
- Display the valid arrangement of queens.

Program code and output :

Result:

Thus, the Python program to solve the 8-Queen Problem was implemented successfully.
