EXPERIMENT 04

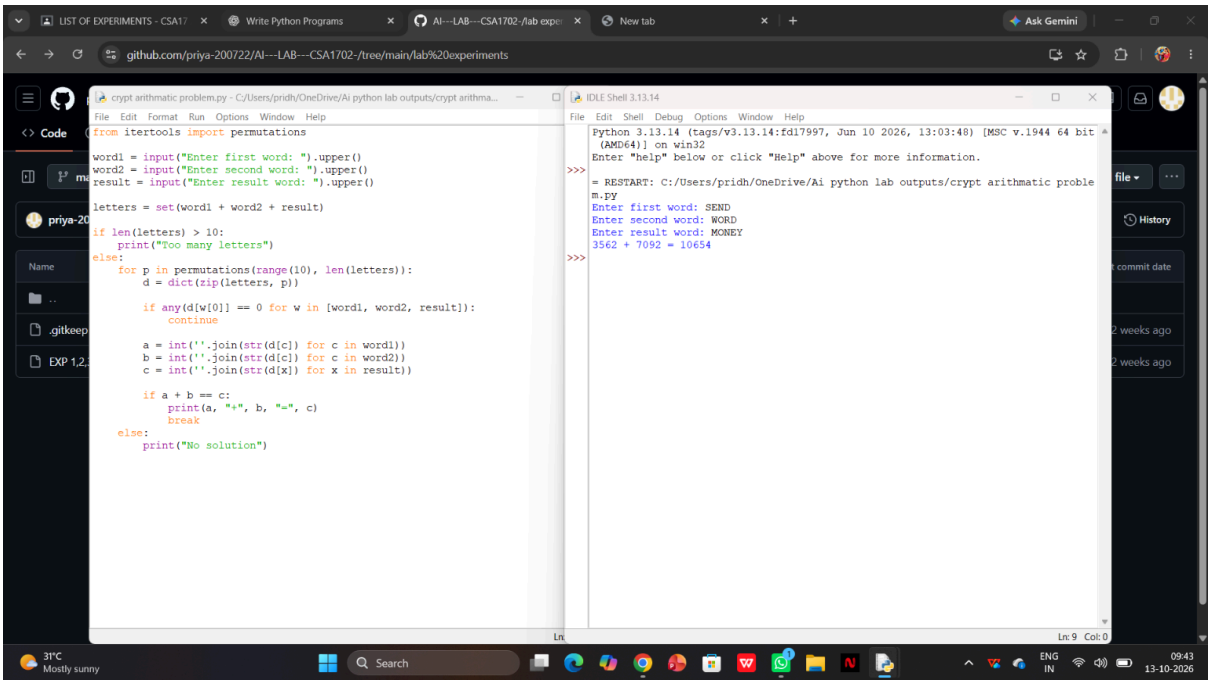

Aim:

To write a Python program to solve a Crypt-Arithmetic Problem by assigning digits to letters so that the arithmetic equation is corre**ct.**

Algorithm:

- Identify the unique letters in the equation.
- Assign different digits to the letters.
- Ensure that the first letter of a number is not zero.
- Replace the letters with their assigned digits.
- Check whether the arithmetic equation is correct.
- Display the valid solution.

Program code and output :

Result:

Thus, the Python program to solve the Crypt-Arithmetic Problem was implemented successfully.
