EXPERIMENT 05

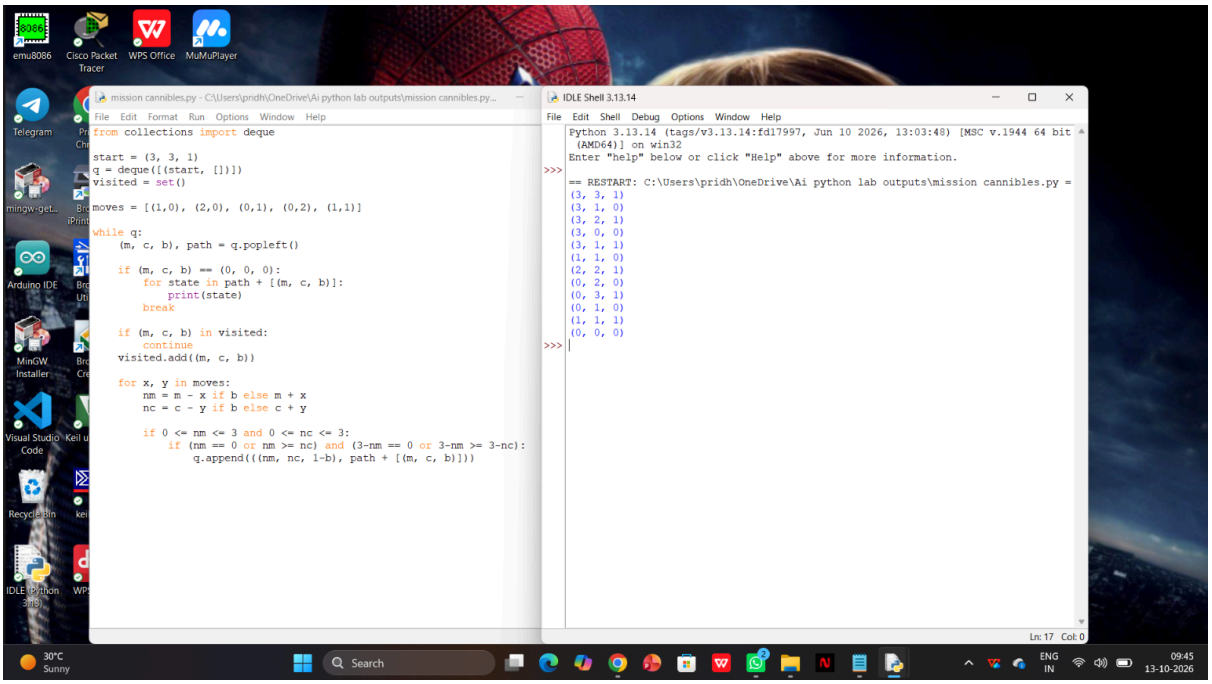

Aim:

To write a Python program to transport missionaries and cannibals across a river without violating the safety conditions.

Algorithm:

- Initialize the number of missionaries and cannibals on both riverbanks.
- Define the boat capacity and possible movements.
- Generate valid states according to the safety conditions.
- Avoid states where cannibals outnumber missionaries on a bank containing missionaries.
- Continue moving the boat until everyone reaches the destination.
- Display the sequence of valid states.

Program code and output :

Result:

Thus, the Python program to solve the Missionaries and Cannibals Problem was implemented successfully.
