EXPERIMENT 12

Tic-Tac-Toe Game

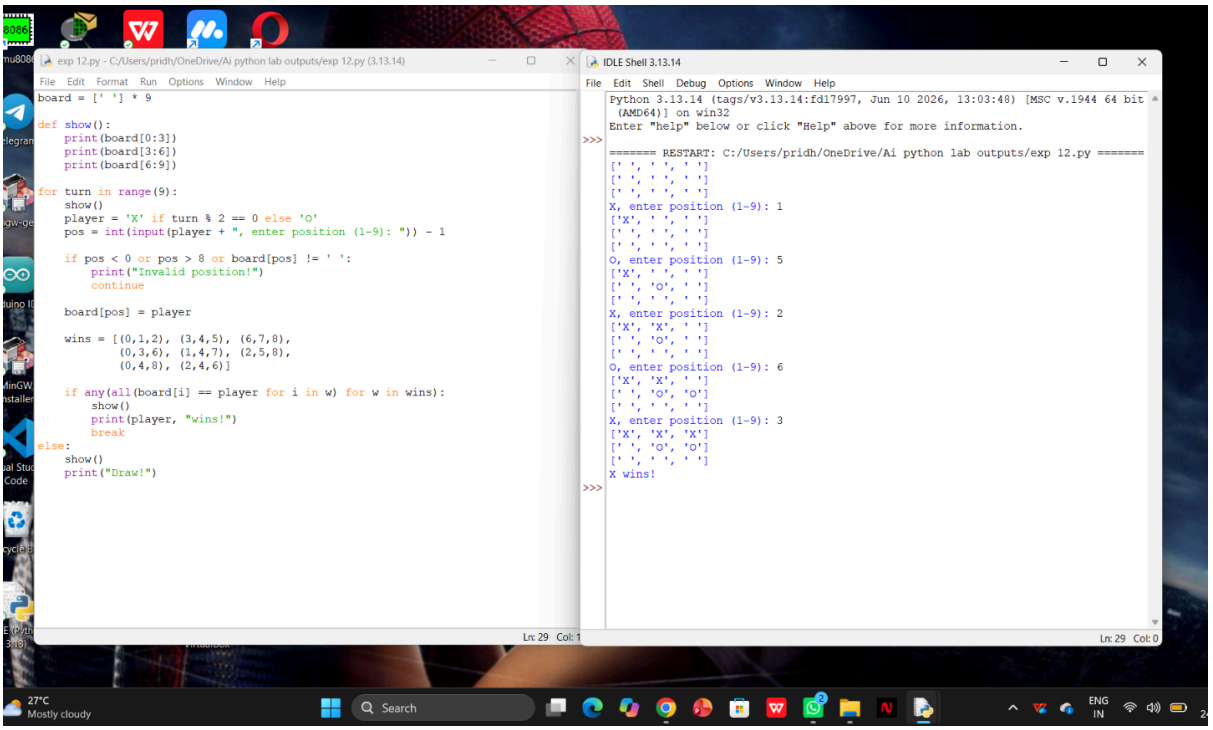

Aim:

To write a Python program to implement the Tic-Tac-Toe game between two players.

Algorithm:

- Create a 3 × 3 game board.
- Allow the players to enter their moves alternately.
- Check whether the selected position is empty.
- Update the board with the player's symbol.
- Check for a winning combination or a draw.
- Display the final board and announce the result.

Program output :

Result: Thus, the Python program to implement the Tic-Tac-Toe game was executed successfully.
