# EXPERIMENT 13

## Minimax Algorithm for Gaming

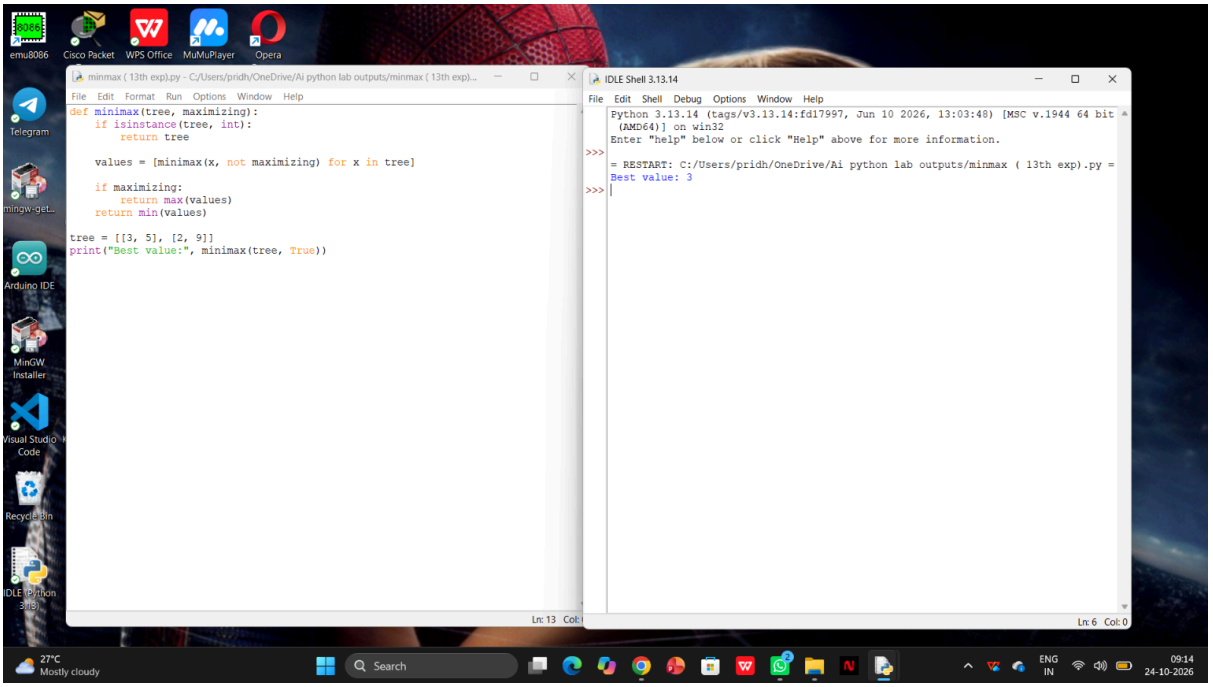

**Aim:**

To write a Python program to implement the Minimax algorithm for selecting the best move in a game.

**Algorithm:**

- Define the game tree and possible moves.
- Assign utility values to the terminal states.
- At the maximizing level, select the maximum value.
- At the minimizing level, select the minimum value.
- Evaluate the game tree from the terminal states upward.
- Select the best move based on the final value.

**Program output :**

**Result:** Thus, the Python program to implement the Minimax algorithm was executed successfully.
