EXPERIMENT 14

Alpha-Beta Pruning Algorithm

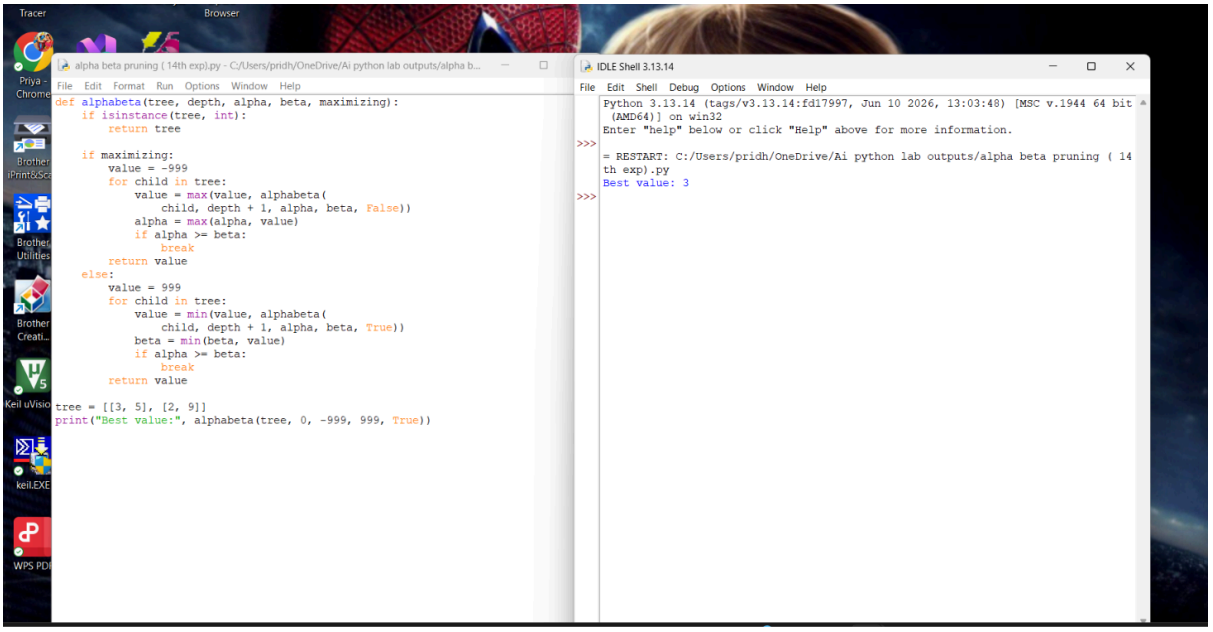

Aim:

To write a Python program to implement Alpha-Beta Pruning to improve the efficiency of the Minimax algorithm.

Algorithm:

- Construct the game tree with possible moves.
- Initialize alpha to negative infinity and beta to positive infinity.
- Evaluate the nodes using the Minimax method.
- Update alpha at maximizing nodes and beta at minimizing nodes.
- Prune branches when alpha is greater than or equal to beta.
- Display the best move and its value.

Program output :

Result: Thus, the Python program to implement Alpha-Beta Pruning was executed successfully.
