EXPERIMENT 01

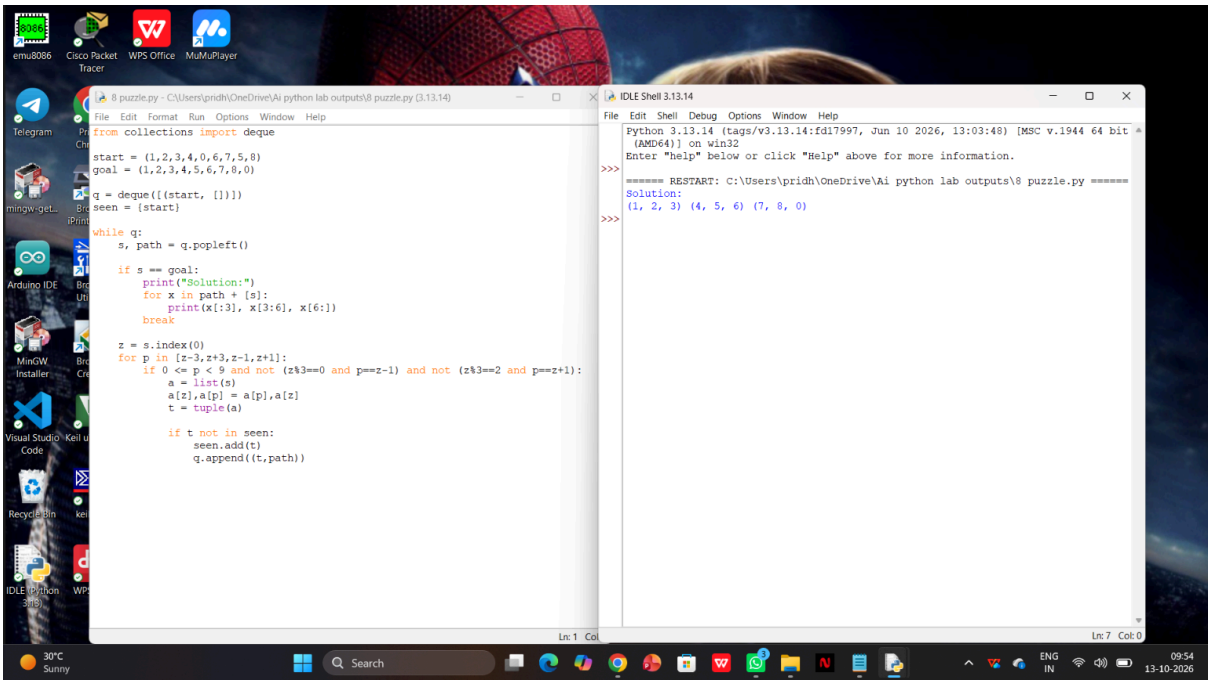

Aim:

To write a Python program to solve the 8-Puzzle Problem by moving the tiles into the correct order.

Algorithm:

- Initialize the starting state and goal state of the puzzle.
- Find the empty space represented by 0.
- Generate possible moves by moving the empty space up, down, left, or right.
- Compare the generated states with the goal state.
- Continue until the goal state is reached.
- Display the solution steps.

Program code and output :

Result:

Thus, the Python program to solve the 8-Puzzle Problem was implemented successfully.
